

Imagine the 10 items below were completely covered in ink. What print would appear on your hand after you used each one? Match the handprints to the objects based on the way most people commonly grasp or use the item.

Activity directions: Pass out hand cards to students. Place one matching items sheet on each table group. When student find their other partners they choose a table group (or one is assigned by a 5th hand card taped to table). Students then try to match their inked hand pair with the items. Class discussion/presentation can follow by making a transparency of items along with the hands transparency. Each group can try to convince the rest of the class regarding the validity of their choice.
